To whom it might concern,

For us – ESTL nv – it is with great pleasure that we announce that Hazel4D has bought the first FEF-200 system in the United Kingdom. This investment will allow Hazel to improve the scientific value of its optimization services.

The FEF-200 is a mobile tool which allows an accurate measurement of the force profile exerted by the stretch film on the edge of the load.

The tool can be used for the following activities:

- To understand the wrapping process
- To expose weaknesses in the wrapping cycle
- To meticulously copy a wrapping cycle from one machine to another
- To compare different technical solutions
- To solve problems of crushed cardboard cases

Kind regards,

Jelle Dendauw
